

Python, and VS Code installation guide

1. Download visual studio code (vs-code) : <https://code.visualstudio.com/download>
2. Install with standard settings
3. Chose "open folder" and navigate to the folder you placed the lecture content
4. Open the file called 04.01-Python-Basics.ipynb
 - a. VS-code ask you if you want to install the recommended extensions for Python. Press yes
 - b. Alternatively, if you do not get this question go to extensions 
 - c. Search for Python
5. Next VS-code will ask if you want to install an interpreter – Press *install interpreter*
6. Browser opens – press Get/få
7. Press *select a python interpreter*, og vælg den der lige er blevet installeret
8. Press *mark done*
9. Press *Explorer*  and select file 04.01-Python-Basics.ipynb
10. Press *Run all* in the top of the page

11. VS-Code will ask you to install ipykernel package – Press *install*
12. After the installation, Press *Run all* - Now it should run as expected

You are now ready to go, and have installed an IDE **VS-Code**, a python interpreter **Python3.9**, and the python package manager pip in the version shown in the first code shell.
